Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airplane's nose gear collapsed after landing while the aircraft was still rolling on the ground after landing. Causing the plane to fall on it's nose and both props to strike the ground and get bent back.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I took off from 87K around 2:45PM Central time for KPTS. My cruising altitude was 3000' MSL. About 7-8 minutes after takeoff, my starboard engine began to sputter and backfire. Within 1 or 2 minutes after that, my left engine began to sputter as well but it was also leaving a large smoke trail behind it coming from the exhaust. By this time, my altitude had fallen to 1700' MSL (about 800' AGL), and I realized that I no longer had the available power to keep the plane in the air and that it was going to continue to descent right into the ground. So I set up for and landed in a field that I had taken notice of when I first began having problems with the starboard engine. Upon landing, while still rolling, the nose gear hit a bump in the field and collapsed, causing the plane to fall on it's nose.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It is my opinion that this incident could not have been prevented unless my airplane had more than two engines. Which it did not have.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Lycoming GSO 480 Engines lost power/malfunctioned.
