While performing the gear down checklist for landing we notice the nose gear light did not come on so we looked out the mirror to verify if it was down. The gear doors opened and I could see partial tire showing 2". Went to practice area to perform our gear inop checklist. After no success I pulled the emergency extension knob and gear did not swing down. I called my chief instructor to verify I had gone through and performed the checklist appropriately. I made several low passes so that ground personnel could see if the gear was caught on the gear door. After that I went to the training area to burn fuel and G loaded the plane several times to force the gear to extend. With no success and daylight running out I decided to land.
