Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left and Right wings, propeller, main landing gear, front fuselage and engine have substantial damage from contact of the ground as a result of a stall and possible entry into a spin.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

To the best we have been able to put together with Patrick's flight and witnesses. Patrick would have prepped his banner and aircraft for the evening tows around 4:30 pm local. At 5:40 he was towing with no issues. He was to fly around Bay City, Midland and Saginaw in the 3 hrs he had to tow his first banner then drop that and tow a second banner just over the Bay City area for thirty minutes. Witnesses stated that he flew the pattern with his first banner for the drop and preceded to make his banner drop at the end of his 3hr tow. The whole operation looked to be normal, except he seemed to be just flying slow. A few power applications were made, but for the most part he was at or nearly at a idle on his power settings during the drop. After the banner was dropped from approx 250 agl. He maintained level to slightly nose up flight. Never adding power the plane then was observed to pitch up and bank left abruptly. When the aircraft appeared to be falling out of the sky by witnesses they said they heard the aircraft go to what sounded like full power. The Aircraft struck the ground going 180 degrees from the intended direction of flight. When the aircraft came to rest it was facing the same direction of the intended flight path. The drop flight path was on a 360 degree heading. Struck the ground at a approximately 190 degree heading. Came to rest at approximately 360 degree heading.

As of this Date Patrick does not recall this banner flight or any details of the crash. It is my opinion that Patrick conducted the drop without adding any or enough power to sustain controlled flight. After the banner was released from the aircraft, Patrick attention went to getting his next hook out or maybe looking to see if his drop was in the location he desired. Somewhere after the drop with no power being applied and Patrick's attention elsewhere. The aircraft slowed to a airspeed to slow to sustain controlled flight and a stall crash followed. When picking up the banner that was dropped in the banner area. There was no drag marks in the grass or ground, indicating that the banner never contacted the ground while in tow. Additionally there was no damage noted to the banner what so ever. The banner, tow rope, and tow hook were all connected properly and together in the drop area. The additional 2 tow hooks were still in the aircraft and hook to the hitch properly when I arrived to the accident site.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

We train and request that during the approach and drop phase of the operation that the pilot increase his/her airspeed and power settings. The purpose of this is to always have enough airspeed to conduct controlled flight even if the banner fails to come off the plane during the drop. We also train and request that all pilots fly their aircraft safely period. All other parts of the operation come secondary to flying the aircraft safely.

As a result of this accident. We have briefed each and every pilot prior to their next flight of the following procedures are required and mandatory.

1. An increase in airspeed in the approach and the drop.
2. The engine power has to be increased to at least 75% power during the drop phase.
3. After the drop there will be no hook deployment prior to rejoining the pattern above 500 feet.
