Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Cowling, prop, exhaust pipe, leading edge on lower wing.

Landed aircraft in corn field, knocked down a few rows of corn

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed runway 31, climbed to pattern altitude , and immediately entered left downwind for a approach to 31,descended to 600 ft Made a pass down 31 then climbed again to pattern altitude and entered left down wind for 31 flew the pattern for a landing on 31 was fast on final so I waved off and decided to land in the grass on 17, At the departure end of 31 I made a left 90 degree turn followed by a 270 degree turn to the right which left me approximately 1.5 miles north of runway 17 and aligned with 17. I felt the aircraft settle and pushed the throttle forward to arrest the settling with no response the rpm of the engine was 3400 so the prop was at 1700 not enough to get to the runway. I called off field landing to myself picked a spot and set up for the landing, I had lots of altitude to get rid of so I stalled the aircraft and did a falling leaf to drop the aircraft down fast ,at a safe altitude I broke the stall gained a few mph where I had positive control the aircraft settled into the 7 foot corn stalks as I pulled back on the controls. I did not notice that the terrain was about 30 degrees up. The aircraft went about a 150 feet then came to a stop with the tail going over causing the aircraft to flip on its back. As it was going over I released my 5 point harness and fell out of the cockpit. My seat pan fell out with me and as I was leaving the aircraft I cut my knee on the seat back. I also ran into the horizontal stabilizer and put a knot on my forehead. I departed the area as fast as I could fearing a fire. After about three minutes I returned and turned the master switch off.i then got my bearings and walked to the nearest road and was met by a friend from the airport how watched me land the aircraft

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The engine was new and had gone through about 4.5 hours of ground run time with no problems. It developed full power on takeoff and ran great at all power settings that I used. I felt very confident it was going to be a good flight
Not sure what I could have done differently. I am tearing the engine down for a visual check and the subsystems will also be checked. I am at a loss of words of how I could have prevented the accident, incident

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The engine did not respond to a call for more power. Engine, Mercury 2.5 v6 OG275466

During removal of the aircraft from the field the land owner wanted to be in charge of it since it was his field. He used a very large Jon deer ,in fact it way more then what we needed. As the tail was lifted it went in a sideways direction bending it and once the aircraft was vertical he allowed it to fall against the tractor bending the left elevater.
