Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Extensive damage throughout the entire ship. Helicopter is a total loss.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My name is Jason S. Hurtt, FAA cert. [REDACTED] on 21 July, 2019, at aprox 0845hrs, while flying Robinson R-44 Raven 1 tail number N459TA, for aerial agri application, in the Ida Grove, IA area, lost power in the aircraft.

I was spraying a field located at 42.341937*, -95.543758*. The temperature was quite a bit cooler, 64*, than it has been and was lower than what is normal for this time of year so I was paying close attention to my carb heat to ensure it stayed out of the yellow. The wind was being reported out of the northeast, 040* at 06kts, but due to the trees and hills around the field, it was more easterly, 090*. I was spraying the field with north to south/south to north swath runs. At the end of my second north to south swath run I came out of the field and executed a gentle, air speed aprox 25kts, left hand tear drop turn. With all the obstacles at the location of the field, I was not able to conduct an ag turn safely, so I was conducting teardrop turns instead. Once I had accomplished the turn and getting ready to get on my line to come back into the field the helicopter kicked hard to the left. I attempted to correct with right pedal and that is when the low rotor rpm light and siren went off. I witnessed my engine rpm below half and dropping along with the main rotor rpm but did have a good split, via instruments, so I got the collective down as fast as I could. In essence I attempted a very high hover autorotation, due to lack of airspeed and altitude. I did my best to just get her down without hitting any houses, wires, trees or any other type of obstruction. I hit the ground very hard causing the boom to bend down and the tail rotor struck the ground rolling the helicopter on to it's left side. I flipped off the master battery, unbuckled and got out as fast as I could. I didn't notice until I was with the FAA inspectors, the next day, who pointed out I still had the key in the both position. The motor was not running when it layed over so I never thought about turning the key to off, I only flipped the master battery switch to stop the low rotor rpm siren. I was checked out and released by Medical Professionals at the scene.
