Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main landing gear, prop, hopper and spray system all destroyed. Wings dented, some panels around nose destroyed. about 2 acres of corn was cut by aircraft and recovery efforts.
I don't know the condition of engine and fuselage frame.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Pre flight included checking oil level, oil pop out bypass valve, fuel level, fuel bypass pop out.

Started engine around 6:00 am. Normal startup/ warmup/ and take off.

Treated first field of the day with 150 gallon chemical load on board, landed and loaded up for second field of the day (325 gallons of fungicide and water) and about 60 gallons of fuel on board. Second take off instruments look normal, take off normal, at around tree top height I start to adjusting to cruse climb, as I start to reduce throttle lever I look at instruments and notice exhaust gas temperature climbing way above redline. I reduce throttle quickly but realize its stopped producing thrust. I turned on igniters hoping it was a flameout and might restart, losing altitude fast I held lowered flaps and held wings level until I hit the cornfield. When I stopped I pulled the emergency fuel cutoff, unbuckled and got out. Checked plane for fire, was none. Turned off igniters, generator and battery then walked back to the airfield.

The field I was going to treat was about 1 mile away from the airfield.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

To be determined. Cause is currently under investigation
