Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Both spars are structurally damaged, aft tail section separated from fuselage, main landing gear springs bent, engine/engine mount bent upwards, propeller dislodged, fuel tank cracked

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Engine start was normal, all values in parameters, all controls free and correct during taxi; cycled prop 3 times with no abnormalities, lined up on centerline of 17, ran power up to 1500 pounds of torque with the brakes held and released, accelerated normally and rotated into a climb at 95-100 KIAS, abnormal power surging was observed and nose was lowered to maintain airspeed, surging occurred every few seconds from full power to idle power, was not able to climb to above approximately 200' AGL, started a L/H turn to try and return to runway 31 or a clearing near the runway, could not complete turn without entering a stall or spin, leveled wings to prepare for off-field landing in adjacent pasture as airspeed deteriorated, forced landing in rough pasture where aircraft was not able to be controlled after contact with the ground, travelled through a ditch that was not visible from the air, and came to a rest roughly due East of the runway 31 threshold. Changes in power/propeller/condition levers did not change engine output, fuel filter warning light came on during initial troubleshooting, was not able to maintain airspeed or altitude with available power. Ejected aircraft through normal operation of the L/H door and waited to make sure there was no fire before returning to make sure the master switch and battery and fuel were in the OFF position. No medical attention was required. See diagram for position.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I had known power would eventually deteriorate completely, shutting down the engine, feathering the prop, and attempting an off-field landing to the other side may have resulted in more favorable conditions.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
