Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front nose wheel assembly bent. Left wing spars bent or broken. 1 upper support wire broken.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Sept 4 at approx 5:30p local time, I departed runway 27 at VNW under VFR conditions heading west for a local flight. Approx 5 mins into the flight at an approx distance of 2.5 miles north west of departure airport at an approx altitude of 400' agl, a loss of engine power was noted. I looked up to see my front carburetor disconnected from the engine. I continued a straight path and an immediate landing was made in a flat bean field below. No persons, including pilot, were injured. Minimal damage to crops were sustained. Aircraft sustained damage to the front nose wheel assembly, port side wing and 1 support wire. Damage to the plane is believed to be sustained by the sudden stopping forces of the thick crop.

RECOMMENDATION (If a mechanical malfunction has been identified)**Operator/Owner Safety Recommendation**

Preliminary assessment is the incorrect, or inadequate, installation of the intake airbox. No support brackets were installed and it was held on solely by support of the carburetors. The weight of the airbox is believed to have leveraged the front carburetor out of its attachment point.

MECHANICAL MALFUNCTION/FAILURE (If a mechanical malfunction has been identified)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Preliminary assessment is the incorrect, or inadequate, installation of the intake airbox. No support brackets were installed and it was held on solely by support of the carburetors. The weight of the airbox is believed to have leveraged the front carburetor out of its attachment point. There are no obvious indications of manufacturer markings, serial numbers, etc on parts believed to be involved.
