Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Impact Damage to front of Aircraft. Engine broken loose, structure around engine Damaged. Cockpit Area Structure Damaged. Fuel Tank Split.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I arrived at Kingsbury Aerodrome approximately 9am for a Volunteer Work Day. The 'Piet' was pulled up under the awning. Roger and I met and discussed the plane. The engine had been run for over an hour the previous day on the ground. We serviced and preflighted the aircraft, then Roger suggested i run it myself. He propped me and we ran the engine up to temperature on the ground, including a full power run of approximately 10 seconds. We both noted and discussed that the engine was making over 2100 rpm static which felt and sounded very strong.

After Shut down, we pushed the plane outside and turned into a taxi position. After a few minutes of talking with other Volunteers, we discussed the test flight profile. i was to takeoff and circle over the field for 30 minutes , with the main focus being watching the water temperature. I had flown the aircraft before and he had an overheating concern, this was to be the confirmation that the issue no longer existed.

We started the engine, and i taxied for a South Takeoff (winds were negligible). i initiated the takeoff roll, the engine responded as in the run up and made +-2100, power felt good. upon rotation, i climbed for a couple of seconds then began a shallow turn to the right, followed by a turn to the left to create an arc back around to the airport in case i needed to return quicker.

Approximately 7 seconds after liftoff, the engine lost power. it was not an immediate cut out, but i heard it 'splutter' as it folled back to idle. After that it was 3-4 seconds before we impacted the ground. By my estimation i was at approximately 100 ft and 60 mph, but in a left turn. i pushed forward on the stick to reduce AOA, and impacted a couple of seconds later in what i believe was to be a nose low wings level attitude.
