NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On Sunday, Jan 27, I prepared my Bonanza A36 (N36PS) for a flight from Angel Fire, NM (KAXX) to Arlington, TX (KGKY). I loaded baggage behind the second row of seats and added 25 gallons of fuel so that each tank was at $\frac{3}{4}$ full. CG was within limits with my wife and I seated in the front seats. I limited fuel to ensure sufficient climb performance after takeoff. Weather was VFR at takeoff with a light right crosswind. After a normal startup, taxi, and run-up, I applied full throttle for takeoff, leaned the fuel to account for the high altitude and executed the takeoff from KAXX at approximately 1:30pm local time. I climbed at approximately 1000 feet per minute and leveled off at 11,500 ft MSL. After clearing the mountains to the east I set a direct course for the DFW area and contacted Albuquerque Center for flight following. I continued at 11,500 with flight following throughout the flight. The aircraft was coupled to the autopilot throughout the cruise portion of the flight. I managed fuel balance by switching between the left and right tanks several times during the flight. Weather was VFR throughout the flight with a wind out of the northwest. Approximately 2 hours into flight I was approaching the DFW TCA and was handed off to an approach frequency. At this point I checked fuel balance and noted fuel levels at just below $\frac{1}{2}$ and at $\frac{1}{2}$ tank on the two tanks. Once with approach, I requested and received vectors for a practice ILS 34 approach to Meacham Field. My intent was to set up the ILS, fly the ILS in VFR conditions, and practice the mechanics of flying the ILS. On final, I was behind a slower aircraft that was 2 miles in front of me so at approximately 4 miles south of the field, I requested to break off the approach and proceed VFR to KGKY. Once cleared, I climbed and turned right towards KGKY. About a minute after making the turn and heading to KGKY at approximately 1500 ft MSL (900 ft AGL), my engine failed as indicated by reduced thrust and a windmilling propeller. There were no unusual noises from the engine that I recall. I determined that was too far from Meacham Field to turn back and land there, but I saw a field off my right front. I headed towards that field as I tried to restart the engine. In my attempt to restart my engine, I switched the selected fuel tank (I do not remember which tank was selected before the switch), ensured the mixture was full rich and throttle full open. I failed to turn on the electric boost pump which is a step of the emergency procedure that should have been applied. Because of my low altitude, I did not have time to refer to my emergency checklist. I did make a radio call to Meacham Field tower informing them that I had lost my engine and was intending to land in a field ahead of me. That asked if I could return to Meacham to which I said I could not. I kept looking at my engine indications to see if the engine was restarting as I approached the field. I approached the field on a right downwind and made a 180 deg turn to line up on final. From looking at the field, I judged that the ground was firm and elected to lower the gear for landing. I continued to look for signs of a restarted engine. I failed to lower the flaps once the landing in the field was assured. On short final, I felt that my approach path and possible ground roll was going to take me into the trees at the far end of the field so I executed a quick left and right turn to lose altitude and shorten the approach. I do not recall speeds during the descent and approach; however, when approaching the ground, I flared to the point that I heard the stall horn prior to touchdown. After touchdown the aircraft nosed over and came to a fairly quick stop. My wife and I egressed the aircraft and I called 911. After emergency help arrived, I went back in to the aircraft secured fuel, turned off the battery and magnetos. My wife broke her right arm above the elbow and I twisted my right ankle, sustained a small cut on my head on my left thumb. My wife and I were transported to JPS hospital for medical attention.
