Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Fuselage twisted behind the cockpit approximately 30 degrees. Tailwheel seperated from spring. Left main wheel and tire destroyed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of this familiarization flight was to Jacob aquanted with the AT-504. On Feb 8th at KFMM standard preflight actions were carried out. Take-off was aproxamatly 10:40, climbed to 8,500ft and accomplished steep turns, slow flight and stalls, before decending to the pattern. 13 good take-off's and landings (stop, reconfigure, taxi back and take-off). On the 14th landing, RWY 32, it started with a small bounce and a slight yaw to the left, then an over correction to the right, and again an over correction to the left. At this point, it became evident that the aircraft would depart the runway. However a RWY light was infront of the aircraft, and heavy breaking was applied, the aircraft swung abruptly, aproxamatly 120 degrees to the right. The aircraft was still carrying sufficient momentum that, the side-load on the left main tire burst and the rim dug into the runway, causing the aircraft to bounce, this action broke off the tailwheel assembly. The tail spring steel strut then dug into the runway twisting the 4130 fuselarge behind the cockpit. The Engine was shut-down and electrics switched off.
