Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tail rotor, tail boom, landing gear, belly of aircraft, internal tubular airframe is bent, windscreen hole damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

It was a local livestock gathering flight. We had mustered some livestock into a pen and went back to try and gather some that got away in the pasture. I was flying parallel to a 10 foot fence, herding a cow towards the pens when I struck a barb wire on the fence with the tail rotor of the helicopter. At that point, the whole tail rotor system with the gear box separated from the helicopter. The helicopter then made about 2 1/2, 360 degree turns to the right. It gained a little altitude, maybe 10 feet. At this time I chopped the throttle and lowered the collective in the down position. to stop the turn and get back on the ground safely. The helicopter hit on the left aft skid on the south side of the fence, approximately 40' from the fence with engine and blades still turning (main rotor blades and engine on). I then shut the helicopter fuel off and all power off in case of possible fire. Then I exited the aircraft. My only injury was a small cut above my right eye, on my forehead. Probably from my glasses.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Watch for obstacles surrounding the aircraft area.
