Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Lower edge of rudder concaved due to impact from tailwheel.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A landing approach was made to runway 18R at KMDH at approximately 11:40am Central Time. While performing a wheel landing, upon touchdown, the aircraft swerved from side to side due to a tailwheel aircraft's natural instability on the ground. The corrective action was made by pulling the control stick back and applying maximum braking. Because of the aircraft's level pitch attitude at the time the brakes were applied, the aircraft did not effectively respond to the rear stick pressure and began pitching aggressively forward. The propeller then struck the runway surface. The aircraft had enough momentum to continue rolling forward onto its nose, crushing the nose cone. Then the tail of the aircraft fell back down with enough force to cause the lower edge of the rudder to impact the tailwheel. The aircraft came to rest on all three wheels.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Upon noticing the initial swerve begin, either exact corrective rudder input should have been taken or should have executed an immediate go-around.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
