Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left front wing damage. right wing tip damage. Dent in spinner. right elevator damage. Dent fuselage in front of right elevator. some wrinkling left side fuselage between rear window and left rear window. rudder control surface has some wrinkling.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Checked weather along planned route. used Intellicast.com and TAF and METARS at KBPK, KTKX, KSTL, and KDEC to make sure weather forecast was good. I was comfortable with weather and wind speeds and directions along planned flight home. planned route was 3M0 to LEPER intersection to VLA VOR and then KDEC at 7500 feet. This would let me stay under MOA. I was using Foreflight for planning too and "packed my bag" around 10:00am to make sure all good with TFR's etc. Was attempting to depart Gastons Runway 06 on 5-31-2020 at just before 11:00am. weather was clear sky calm wind. Temperature was around 73 degrees. Made sure runway was dry and not muddy other than were was known to be muddy while loading plane. Turf was in good condition.. Did preflight and all good. Did runup and all good. There is a muddy spot at the beginning of the runway so I taxied around it to the right side of the runway. As I was going around it I pointed the plane down to the center of the far end of the runway and I figure I would correct as I was on take off roll. I slowly added power and back pressure on yoke to protect the nose wheel. While going down runway I was putting in right rudder to center down middle of runway. I noticed I wasn't turning like I thought I should be. at that point it felt like I was about to get off the ground so thought if I got up I could correct then. I realized it wasn't going to happen so I immediately cut throttle. I couldn't steer or stop before hitting some trees on the left side of the runway. I hit some trees and it spun me around sideways and into some small trees and bushes. I immediately turned off ignition and master switch and shut off the fuel. I exited the plane immediately after that. I didn't notice any fuel leaks or anything dangerous. by then people were there to check on me and authorities had been called. Police, fire and EMT arrived but there was no fire or medical need so they left. police took my report and they told me the FAA and NTSB were contacted already. I gave the officers my statement of told them what happened and they took pictures and I assume statement from witnesses. I talked to the person from the FAA while on the scene from police officers phone. He told me the NTSB was contacted. I wanted to be sure. He then told the officers that He would use all the Info they collected to do his investigation so I was good to go. I stayed to help out the State police officer with what he needed and when he left I was OK to go. I stayed another night to relax and wanted to stay anyway in case something else was needed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Should have practiced soft field operations more recently.

Should have lined up down the center of the runway from the start instead of trying while on take off roll.

Should have aborted take off roll much earlier.
