Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Only aircraft damaged.

Aircraft received substantial damage resulting from a ground loop upon landing.

Right wing contacted ground, bending spars and multiple skins. Right wheel and tire assembly sheered from landing gear leg. Landing gear leg torn from fuselage gear box. Windshield removed from lower channel. Fuselage sustained substantial damage to structure, door posts, gear box, belly, and cowling. Empennage received skin damage and bent right elevator. Propeller destroyed due to ground contact, engine stoppage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft purchased the morning of 8/24/20 at 50F, Bourland airfield near Cresson, TX. Aircraft had been flown earlier that morning for a demonstration flight. Upon completing the sale documentation the aircraft was refueled at 50F fuel farm for a total of 80 gals of 100LL on board. Aircraft loading completed as well as preflight checks.

Departure from Bourland airfield was near 1445 Z, central time. Takeoff, climb out and cruise all normal, systems checked good. Enroute to KLBO for refuel was in good VFR conditions with no issues. KLBO, Jones Lebanon, MO airport was the destination for the refueling stop before continuing on to the final destination of KEKM, Elkhart, IN.

After approximately 2.5 hours enroute at 10 NM from KLBO weather was obtained from the AWOS our location and intentions were transmitted on Unicom frequency. A decent was started along with setting up for pattern entry. At 5 NM we announced position west southwest of the field, continued decent, and started to slow the aircraft.

The left hand down wind leg was entered for traffic pattern runway 36 at the midway point of the runway. The aircraft was slowed to flap speed of under 100 MPH abeam threshold, added 10 deg flap and completed landing check list. On base leg flaps were extended to 20 deg and airspeed reduced to 70 MPH. Final approach was stable with minimal power, flaps at 30 deg and airspeed at 65 MPH intentions were to wheel land.

Near the threshold a smooth touch down of the main wheels were made at approximately 55 MPH, power reduced to idle and slight forward pressure on the yoke. A small amount of right rudder was added to correct for a slight left turn, bringing aircraft straight. As speed was reducing the tailwheel touch down and began to shimmy. A strong right turn initiated, full left rudder was applied with no effect, left brake was added resulting in a turn back to the left. The tailwheel continued to shimmy as right rudder and brake was applied with no effect to straighten aircraft.

Side load increased on the right main tire assembly causing it to sheer from gear leg. Gear leg then dragged on runway until tearing loose from gear box. Right wing, fuselage and propeller then struck the runway.

Aircraft came to rest on runway turned 90 deg from approach heading. Fuel valve, master switch and magnetos were turned off, we departed aircraft through pilot door and remained on scene for assistance at approximately 1730 Z.
