N75139

On Saturday, October 12th I was informed by the maintenance manager from US Aviation at Alliance that Arrow N75139 had landed at Kezer private airport (61TE) and I was asked what the options were for me to retrieve it. I responded I would have to be authorized to go get the plane. Later that night the director of maintenance from Denton US Aviation called and asked me to go look at the plane to determine the cause of the off-base landing. It was later suggested that it had run out of fuel in one tank by the previous crew. I was asked to go out in the morning and confirm this, determine if the aircraft was safe, and if so fly it back to Denton. Sunday morning, October 13th, I caught a ride in a C-172 with an instructor and a student out to Kezer Air Ranch. They were to follow me back on my route to DTO. I performed a pre-flight inspection, verifying the left tank was dry and the right tank was full. This was confirmed by the flight instructor and advanced student with me at the time. I sumped the right tank and gascolator. No contamination noted. I performed a thorough preflight. I selected the right tank on the fuel selector and started the engine. The engine started normally, ran smoothly, sounded good. With the engine stable, I taxied to the north end of the runway and onto the run-up pad. I performed an extensive run-up attempting to find any indication of abnormality. With no negative indication, I called the chase plane and told them I was taking the active. Once again, I ran the engine to takeoff power and held it waiting for any indication of abnormality. With the engine running smoothly at full power sounding good, I reported I was taking off, released the brakes and started the ground roll. I took off, and proceeded to climb while circling the airport. The engine sounded good, ran smoothly, and there were no faulty indications on the gauges. Climbing through 4000 feet I saw the 172 take off and turn downwind to the north. I continued the climb to 4500 turning north and departed the airport. 7-10 miles to the north, with no indication of an issue (Engine was not running rough, missing, coughing, or grinding) the engine suddenly quite developing power- however, the propeller was still windmilling. I radioed the 172 and told them I had an engine failure and was turning back to the airport. On a 2-3 mile final, I noted and reported I was going to be landing short. I cleared a row of trees to the north, setting down just south of the trees, impacted a gate and came to stop several hundred feet south of the point of impact. I estimate the total run time of the engine to be about 20 minutes.
