Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

I have not seen it but from what I hear it was damaged beyond repair.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My day started at Dallas Love Field. I conducted a very thorough preflight for my first flight of the day. I departed DAL to pick up a passenger that I have been training to fly. The short flight to KTRL went as planned and no issues noted. Upon reaching KTRL I told Patrick I was going to fly from the left seat since we would be doing a low approach into Gladewater. I was stopping there to drop some headsets off to some friends of mine. It took us a long time at the end of the runway to get a clearance. Afterwards, we departed KTRL around 1:15 PM. and climbed to 3K feet. Upon reaching cruise altitude I left the levers in the full forward positions for 2-3 minutes. I was about to begin by cruise check list and pushed my checklist button. The engine shook very hard so I immediately went back to the engine page. Everything seemed normal. However, I left everything forward a couple minutes to verify everything was ok. I was about to begin my cruise checklist again when I noticed my Number 5 Cylinder went red. This was not normal for sure. The two middle gauges blanked out but came back. Then I noticed my manifold pressure was about 28.5" and realized the engine was not making full power. I was slowly descending without which any intentions of doing so. Dallas ATC was about to transfer me to Longview. I told them I was having engine problems and needed a place to divert. They gave me two options which had no IFR approaches. That did not seem like a good option since it was low overcast. They gave me two options which had approaches. The engine had smoothed out and I had began a small climb of about 200 feet per minute. I think I reached about 2400 feet. I transferred to Longview during the climb. A short time latter the engine begin to shake again. I decided to declare an emergency and ask for vectors to the final approach fix for KTYR since I was about 6 minutes away. The controller acknowledge and gave me the clearance. Shortly afterwards the oil pressure began dropping to the extreme low side of the possibilities. I was again descending in altitude with wanting to do so. I told ATC that I was going to pull the chute if i reached 1000'. I was also having to navigate around obstacles that kept appearing on the screens. My power was getting much less. I went from low boost to high boost in case it was a fuel issue. Upon reaching about 1450 feet (900 ' feet agl) you could see nothing forward but some broken clouds and tress below. Having a fuel tank that was almost full, this did not seem like a good choice. Upon on reaching about 700' agl, i was at the base of the clouds for the most part. I noticed a field to my right and turned towards it to pull the chute. The stall warning came on at this time. I lowered the nose in an effort to prevent a stall. I noted a fence and tower in the field. A short distance into the field I deployed the chute due to getting lower than I wanted with the intentions of coming back down to pull the mixture and throttle to idle and cutting off the fuel. However, upon deployment, my seatbelt did not catch me and i came forward and hit my head on the dash rendering me unconscious and causing a large laceration. I have no further memory till waking up and seeing the ambulances coming to get us and the plane already in the back of the field. Patrick had already gotten me out of the airplane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I see no way to have prevented this accident. I had no control of the engine failure. It is possible the service center in Colorado may have done something but I can not say. They were working on it about two weeks prior. My injuries could have been less if the seatbelt and airbags had worked properly. I would also add that in an emergency other pilots should refrain from radio use as much as possible. Several times I wanted to talk and could not due to the congestion on the radio.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The engine quit producing power. Seatbelts and airbags didn't work on pilot side. Airbag didn't work on both sides.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Pilot times are close but are estimated. Some squares can be calculated that are blank but will take a while to do so.
The FAA has the log books so those records I can not enter on the report. (Prop, Engine, ELT, Inspections,)
I was not sure if operator meant me or the owner.
The event started in cruise flight so I did not fill out the approach information.
I think it is a 4 point seatbelt system but not sure.
I was thinking the airbags made it inflatable but they did not work.
No place for basic med on the report. Any other information needed please feel free to contact me.
I did not know the weather information for the area of the accident. Just the weather received prior to the flight.
If a blank was not filled in it was because I did not know the answer.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
