Attachment answers info you requested on Pilot

On the plane the log books are in the plane which we discussed yesterday. I have sent email to shop who did the gear overhaul and I-IV inspections and asked for the logbook info which they said they'd get to me promptly. If anything else just let me know.

Per your request yesterday, I have gone through step by step all I remember about the problem we had with gear. (see attachment). I have had the folks holding the plane requesting release for them to drain fuel tanks. I think they have discussed this with you by now. Let me know what other information you need from me.

Re: Kingair 405PT/ Accident at KSUS on 2/6/20

I picked the aircraft up at Aircraft Interior Solutions, Inc in North Little Rock, Ar at about 12:30pm on 2/6/20. I had taken it in for Ph I-IV inspections and was advised by the shop that the gear was due for a complete overhaul (See attached email I paid for the components to get this work done).

After pre-flighting the aircraft I departed from KORK for KSUS at 1:01 pm and landed at 2:06 pm. On departure I heard the gear retract. After hearing the gear retract, I noticed I was still getting the red gear-in-transit indication. I wasn't too concerned because this is a problem I've had in the plane in recent past. After confirming I was getting cruise speed (ground speed with tail winds were 230 knots) and no visible gear-down I decided this was same problem I had had. I even made a note on pad still on console to let repair shop know about this.

Knowing the gear had been completely overhauled though, I intended to watch it carefully on arrival. I was in VFR conditions during gear extension and approach to landing at KSUS. On gear extension I heard the gear extend but did not get the 3 green lights. I visually confirmed both mains were extended and called tower to request a low pass so they could confirm the nose wheel was extended. As I passed the tower they did confirm all my gear down. As they turned me back down-wind I went thru the emergency gear extension procedure. After I raised the handle, I manually engaged the gear by raising and rotating the hook under the handle. I felt resistance on the handle and stopped assuming that was not the problem, the gear was visually down, and I had heard it extend. I was concerned at this point with putting pressure on what might have caused the gear not to completely retract leaving ORK. I assumed I had some kind of wiring issue.

I did slow the plane as much as possible before touching down and landing seemed normal for a few seconds. Then the plane steered hard left and I didn't seem to have rudder pedal control to correct it so I used right brake and it turned back to the right and continued a hard right turn until we left the runway, when it started sliding left wing first.

This is all I remember. Give me a call if we need to discuss or if you have any questions.

Hello George,

The total on this estimate is \$[REDACTED] which is the major components for the 6 year gear inspection and all 4 brakes. Please remit so we can get parts ordered.

Per your request yesterday, I have gone through step by step all I remember about the problem we had with gear. (see attachment). I have had the folks holding the plane requesting release for them to drain fuel tanks. I think they have discussed this with you by now. Let me know what other information you need from me.

Picked up aircraft after completion of phase inspections at KORK. On departure noticed after gear retraction that the red in transit light on gear handle was still illuminated. I heard the gear retract and visually verified the mains were up then verified my enroute airspeed to confirm the nose wheel could not be down. Realizing I had had a recurring problem with this transition light in the past not making proper contact and shutting off, I just assumed it was that same problem so I noted that on pad still on console in the aircraft so I could tell maintenance folks about it. In the past it had had something to do with making proper contact with a squat switch I was told. On landing I heard the gear extend but after tower confirmed all gear down as I circled back to land I performed the manual gear extension procedure I had practiced multiple times during years of sim training. After getting resistance I was concerned with damaging something so just assumed I had a lighting problem.
