Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing leading edge crushed rearward from impact to 6" diameter tree, approximately 38" from wingtip. Propeller made minor contact with a small sapling, 1.5" diameter, peeling some bark off. Fuselage skin wrinkled at bulkhead behind rear window, rear window broken. No notable property damage other than a few small broken branches.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My flight originated in Pontiac MI - KPTK at approximately 10:57 am with one passenger and arrived at Harrisville, MI 5Y0 at 12:12 pm, landing without incident (landing #1). The aircraft was shut down and deplaned. Shortly after, I loaded 3 passengers and took off for a short local flight, and returned for landing approximately 12 minutes later (landing #2). Once again, the aircraft was shut down and deplaned. I then loaded 2 different passengers and myself (total 3 on board) and took off for another local flight at approximately 12:40 pm and returning to 5Y0 at just before 1:00 pm. The first approach was a little high and I opted for a go around. The second approach was normal, but while on final approach as I descended below treetop level, there was a change in wind direction and speed with turbulence induced by terrain changes. As I touched down the aircraft bounced and I made elevator corrections to settle the aircraft onto the runway. Once all three wheels were in contact with the runway, I was slightly left of center. Approximately midfield there is a clearing (unused cross runway). When I passed this clearing, there was a strong wind gust that caught the vertical Stabilizer of the airplane and pushed the nose of the aircraft to the left. I applied heavy right rudder for correction to no avail. In addition, slight braking to both mains was applied appropriately for the terrain. The aircraft departed the left of the runway and the left wingtip struck a tree, spinning the aircraft 90 degrees to the left and coming to a stop. The speed before impact I estimate was less than 15 mph. I immediately pulled mixture to cut the engine, shut off the main power supply, shut off the main fuel, and evacuated myself and passengers. There were no injuries.

*Please see attached photographs/markups.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The runway with Yellow marking cones is located to the East side of the "Usable" grass/turf area and only 60' in width. The usable grass area is approximately 100' in width.

The airport information remarks state "+15-45 FT TREES IN PRIMARY SFC; E SIDE 30 FT FM RY 03/21 CNTRLN."

For some unknown reason, the runway is not centered on the available landing area, thereby placing aircraft in proximity to the trees on the east side of the runway with little room for error. In this particular case, if I would have had an extra 4', there would have been no incident or impact with trees.

Recommended changes:

- 1) Relocate runway centerline to align with the center of the usable grass/turf area.
- 2) Move edge cone markers to increase the width of the runway.
- 3) Remove trees on the East side of the airport to provide additional clearance.

*Please see attached photographs/markups.
