NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Due to a problem with the altitude compensating fuel pump the plane was being flown to Cincinnati, OH to visit Signature Engines at Lunken Airport. This was the 3rd visit in less than a week. They had asked that an Altitude Leaning Schedule be performed on the trip down, which was completed. I departed Indianapolis Metro Airport (UMP) at approximately 10:45 AM climbing to 2,000 feet to take the first reading. A step-up climb (brief stop every 1,000 feet to take readings) was made all the way to 14,000 feet. At about the halfway point of the flight a climbing 360 was made. Once the test was complete, the plane was turned South East towards LUK and I made a descent to 7,500 feet.

After I obtained the LUK ATIS I contacted Cincinnati Approach on 121.0. I was cleared into the Class B airspace and a few moments later the controller cleared me for a VFR descent at pilot's discretion. As I recall, no final altitude was given. Since I was at 7,500 feet, I lowered the landing gear and set the flaps to the approach setting to assist with the descent. I understood that there was northbound traffic at 3,000 feet ahead of me, and since I was approaching 3,000 feet, I continued the descent to 2,500 feet. I was expecting the visual approach to runway 21L so I maintained a heading that would set me up of a right base to 21L. The controller then asked me to contact LUK tower.

Shortly after I made contact, I noticed an unusual noise and vibration that I had not experienced before. Checking the engine analyzer, I noticed that one of the cylinders was no longer producing EGT. A few moments later, another one dropped offline, and then a 3rd. Cylinders kept dropping offline and within a few moments, the engine had quit. I started looking at landing possibilities as I was sure I could not make LUK. I raised the gear and flaps, put the auxiliary fuel pump in low boost, pitched for glide, and informed LUK Tower that I was declaring an emergency. They suggested that the, now defunct, Blue Ash airport was close by, but I could not see it, so I started looking for other possibilities. That part of Cincinnati is a densely populated residential area. I saw a small, grassy area, but I discounted it as it appeared to be surrounded by houses.

I saw several stretches of highway and a couple of them appeared to have large gaps in the traffic. I started to set up for a landing on what turned out to be I-75 northbound. As I was descending, I saw high tension lines running along the highway and pitched up to avoid the lines. By doing this, I expended most of my forward momentum and the stall horn started blaring. Once clear, I pitched the nose over and realized there was a row of tall light poles running right next to the highway. Again, I adjusted my approach to landing. As I got ready to make my turn to land, I lowered the gear. By this time, I was very low, and the airplane was close to a stall. In the turn, the left-wing tip caught the top of a wood post holding the Armco barrier that runs along the highway. This pitched the nose left and the plane landed hard on the right main gear and the nose gear, causing them to collapse. The plane then pitched right, hitting the Armco barrier on the other side of the highway. The nose of the airplane contacted the concrete bridge abutment and the plane slid under the overpass. Since the airplane was full of fuel, I was concerned about fire, so as the plane came to a stop, I started shutting down the switches on the sub panel. I thought I had put the auxiliary fuel pump in LOW boost, but my recollection is that it was in the off position when I was securing the cockpit. In retrospect, this makes me unsure that I had in fact turned it on or had accidentally bumped off while manipulating the landing gear and flaps. At that point I was anxious to get out of the airplane.
