Subject: Cessna 210 Battery test

Mike,

As requested, I pulled and tested the battery from N1JA yesterday. I have included a picture progression from airplane to test. Here's what they mean:

Initial voltage test was 23.76 VDC. I took it to FVTC's Maintenance shop to use their Concorde tester/charger and it showed that the battery had 21% capacity. If you would like, I could have them do a full recharge and test from 100% charge.

Regards,
Nate Smith
