Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing struck a small tree just outboard of the right main fuel tank into the wing spar. At that point the tree tore the skin outboard along the wing spar for about 18 inches. The outboard attach point of the right aileron broke loose and the right wing tip separated and was on ground very close to the wing. The left wing had many dings from the brush and the landing light lens was missing.

Damage on the ground was limited to the tree and sagebrush along the landing path.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preformed preflight, pre-taxi, and pre-takeoff checklist to include runway at around 0915. Took off from Cleburne Regional Airport (KCPT) on runway 15 at about 0925. The wind and weather was nice. Flew to the SW along US Highway 67 for several minutes. Noticed that the oil pressure was edging toward the bottom of the green arc. I checked the oil temperature and it was normal in the green arc. I turned back towards Cleburne and shortly thereafter I felt the engine shaking. I reduced the power setting as I did not want the shaking to become violent. Then I applied a little more to maintain altitude and then the engine stopped. I do not remember if the prop was wind milling or not - but the motor was silent. I estimated by altitude to be about 1200 AGL. As I was already on the frequency, I made a radio call to the traffic that was in the pattern at KCPT and informed them of my situation and asked them to pass the information on to the FAA. Evaluated immediate landing options, set best glide speed, and set down on a gravel gas lease road. The road had a slight down hill slope but not much more than I would expect at a rural airport. I touched down smoothly and stayed on the gravel road until I reached a point where the road slightly turned. The airplane would not make the turn on the gravel. Continued straight into some sagebrush until impacting the bushes and then a tree. The airplanes energy had dissipated to the point I did not even notice a tug on my seatbelts when everything came to a stop. I exited the aircraft and got away as quickly as I could and then called 911.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I would shy away from purchasing an aircraft with an engine that was not commonly used and only has limited support from the manufacturer. In the future I would also stay away from the IO-346-A engine as Continental indicated that debris blockage of the oil pressure regulator was a common issue with these engines.

I am not certain that the oil pressure indications had anything to do with the engine failure or not. It did not sound/smell like what I have seen in videos where oil was removed from an engine and run until failure. Since the oil pressure and oil temperature was still in the green I was surprised when the shaking started.

Once an evaluation of the engine is made, I may have a different opinion.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
