Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

I did not see the aircraft after being extracted. What I could see from inside the cockpit, was that it looked destroyed. I was trapped and in severe pain. When they removed me, I closed my eyes to avoid further trauma.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed KSWW close to sunup after doing a full weather briefing on firelight, with an uneventful pipeline patrol flight up to KCUH. I rechecked weather for the remainder of my trip and everything had improved to VRF. I topped off my fuel and made appropriate notations in my book. (My procedure for fueling is to select the left tank for fueling, and before I enter the plane, I make my records and switch the fuel selector back to Both). I had been asked to deliver cases of oil for another pilot and unload at KCUH. The line attendant opened my baggage door, surprised to see so many cases. I began helping him unload it. This interruption could have possibly distracted me with the fuel selector. I started up to proceed on my route over and around to Ennis. I do a CIGFTR checklist before taking off, and feel like I would have caught the selector not being on both, but I cannot be for certain. As I got into the Conway, AK area, I got on a line on which I'd had a complaint, so I was making an extra effort on this segment to Corsicana be super vigilant. I normally make a stop at Mt. Pleasant, and many times over night there. I was breaking off the line to go in for a break, and a small amount of fuel. I was at the 4-4.1 hr. mark, which gave me about another 40 gallons of fuel on board. I would have gotten 10 gallons to satisfy our company policy and get me to Ennis. I was going to check ATIS when the engine surged. I switched fuel and richened the mixture, and got another 1 or 2 surges. I circled a couple of times to try to find a place for a forced landing, while trying to restart. It was apparent that for whatever reason it was not restarting. I saw a tall antenna, an interstate with heavy traffic, large power lines, and a small field with trees on the end of it. After no luck in restarting, and quickly losing altitude, I had no choice but to try to get it in the field, which I then noticed a fence. I did the best I could do, but ran out of room and ran into the trees before I could stop. I was lodged inside the cabin and fuel was leaking. I managed to get SOS on my phone and get rescue on the way. The fire department ambulance, and air flight got me to the hospital. I wound up with a hip replacement and shoulder injuries. It puzzles me because I feel that if I had been running on the left tank, the fuel gauges would have been noticeably different. I don't rely on them for fuel consumption, as I rely on my set timers and known fuel consumption. I feel like I would have noticed a big difference in the two tanks. (Weather info in the above section was from the briefing early morning, not the current weather which was 10 mi. vizability and clear).
