Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Rex Kelley filled out this section.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At that time, we had three loads that day (150, 70 and 40 acres). A weather front passed through earlier that morning and we waited a couple of hours after it had passed before beginning operations. As they were loading the plane for the 150 acre load, they loaded 155 gallons. I'd called the Ord (Evelyn Sharp Field AWOS) and it was reported calm and 70 degrees. I wanted to take the 150 acre load first because of the weather conditions being reported as later the temperature would become hotter. I've taken loads of 160 gallons several times prior to this and a few loads of 180 gallons, given the right weather/temperature conditions. Engine start was as normal. I then proceeded to taxi to the runway from the loading pad. Once I had a view of the wind sock, it confirmed no winds were present. I decided to take off on the northern runway (RWY 31) because my field was to the west of the airport and there were hills I would have to fly over enroute to the field. Taking off to the south, I would have had to turn west sooner due to the town location and population. Prior to entering the runway, I ensured my mixture was rich and I conducted an engine run up at 2,000 rpm. Both right and left magnetos checked normal. Upon cycling the prop to circulate fresh oil in the prop governor, I noticed black smoke coming out the exhaust. This was the first time I'd ever experienced this. I waited about 15 seconds then cycled the prop once again. This time, no black smoke was observed. I then proceeded to depart on RWY 31. I pushed the throttle to full using a 5 count, I increased in speed as prior takeoff rolls. Because I was carrying 155 gallons, I knew my takeoff roll was going to be longer than for lessor takeoffs. Tail section came up as normal and as I approached 80mph the plane lifted off the runway. I kept the aircraft in ground effect until my airspeed was above 90mph prior to climbing and I still had runway in front. The aircraft climbed as normal as I kept the 31 heading until I knew I was higher than the hills before I started my turn to the west. Upon turning to the west, I began to notice my airspeed decreasing. I rechecked throttle, prop and mixture positions and they were normal takeoff settings. The aircraft continued to maintain altitude. Of note, we experienced this before when turning toward the west, not just myself but also the other pilots. However, the aircraft would again begin to climb prior to reaching the hills. Once I realized the aircraft wasn't going to climb, I felt it settling (weight wise), my airspeed kept decreasing and I was approaching stall speed. At that point I'd decided not to dump my hopper because of the vast increase in height it would have put me and at such low speed, I was afraid that it would stall and enter a spin (at a higher altitude). So, the aircraft continued to settle. Prior to impacting the ground, the right wing began to drop indicating a stall however given the height above the ground, it didn't enter a spin. Once the aircraft came to a halt, I turned off all electrical switches and departed the aircraft.
