NARRATIVE:

On 09/21/2020 at approximately 2:30pm I was dispatched to the area of 3175 S SR 66, Marengo. Crawford County Dispatch had advised that a single engine plane had crashed near that address. I initiated my emergency lights and siren and proceeded to the scene from English, Indiana and arrived on scene at approximately 2:40Pm. Upon arrival I saw a multicolored, 2 seater ultralite aircraft sittin on its nose (front) in the driveway of the address. As I approached I saw an elderly gentleman that I knew as Robert Pierpont. Robert was conscious but confused. He said he thought it was the year 2000 or 2004, and did not remember any of the details of the incident. Robert was placed on a back board and secured and taken to EMS2 for evaluation and to await arrival of Air Methods for air

lift to University of Louisville Hospital. Robert appeared to have minor injuries to his left wrist and head, and as the time passed seemed to become more cognitive. I photographed the scene and spoke to a witness, Rodger Curry who was flying a seprate ultralight aircraft with Robert, who told me that Robert had been experiencing engine trouble and was on decent to check out the issue when his engine completely failed and that he had brought the plane around to land from west and clipped a small tree which spun him around and landed the aircraft on its nose. The National Transportation Safety Board was also notified of the incident and provided this report. Robert was airlifted to University of Louisville Hospital for treatment. The flying partner, and witness stated that once he got clearance from the Sheriff's Department, that he would disassemble the aircraft and take care of it.
