Hey Scott,

Concerning the Aeronca 7AC, N81624: In response to your email. upon investigation of the aircraft at the site of the event, it was discovered that the aircraft had experienced fuel exhaustion. Both myself and Brian Lands conducted the investigation, and it was determined (with the exception of an empty fuel tank)

- There were on anomalies with the engine
- There were no anomalies with the fuel system

The pilot stated that her calculations for fuel, time, and miles pertaining to that trip could have been miscalculated. She stated she is always diligent in planning and did not understand how she would make this kind of mistake.

Kind Regards,

David Schluep (ASI)
