Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both landing gear folded. Propeller tips bent. Belly fabric torn. Right side engine cowling wrinkled.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Narrative created by instructor with input from and reviewed by student.

Student completed smooth landing with minimal control input from instructor. Student added power for takeoff from landing ground roll. Student began to raise tail. Aircraft was slightly right of center line. Student applied right rudder. Aircraft began to drift right on runway before lift-off. Instructor engaged left rudder and left brake. Aircraft left runway on right side onto smooth sandy dirt with some short weeds. Student attempted to pitch up to take-off and instructor used both hands to override and keep aircraft on the ground. Instructor fully engaged both brakes. Instructor closed throttle.

Segmented circle consist of heavy gauge steel oversized half barrels. Segmented circle appeared in instructors limited view around the student out the right side. Instructor began steering left but obstacle was too close to turn far enough to avoid it in time. Right landing gear folded on contact with barrel. Aircraft struck ground bending propeller tips, braking one of two bolts on left landing gear, tearing fabric on belly and wrinkling right side of engine cowling. No injuries to occupants. No leakage of fuel or oil.

It was the instructors judgement that the take-off roll had not proceeded far enough to have sufficient speed for take-off. Instructor chose to keep aircraft on ground rather than risk chance of stall and subsequent serious injury. None of the instruments in the panel, including the airspeed indicator, are visible from the back seat where the flight instructor flies.

In this model of aircraft, along with many other tail wheel aircraft, there is no visibility directly over the nose of the aircraft when the tail wheel is on the ground, especially from the back seat.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Instructor intends to refuse future request for primary instruction in tandem seating, tail wheel aircraft. Limit tail wheel instruction to transition training, flight reviews and proficiency training. Perform primary training in tricycle gear aircraft.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
