Kitfox 4 crash at New Carlisle Oh Oct 13, 2020

Information about the crash came from Pat Driscoll who witnessed the incident. He first saw the wheels touch the ground and a slight squat of the gear. My normal reaction to the gear contact would be a slight push forward of the stick to keep the plane from ballooning. Pat noticed a slow rise of the tail. He saw the prop striking the ground. We had moved 100 ft. at which time I heard a loud bang and jolt when the prop hub hit the ground.

The plane continued to rotate forward until it was completely upside down. I noticed a small fire starting under the engine at this time. Both Joyce and I were trapped by our seat harnesses hanging upside down.

Pat drove down the runway and was able to unfasten first my wife's seatbelt and then go around the plane to release mine. He saved both our lives from the fire.

The weight and balance of the aircraft was already done in '06. The only difference in the Kitfox was the change of the gear. I was able to remove the weight and arm of the old gear using my excel program that I had originally used to calculate the CG of the aircraft. This showed very little movement of the CG.

I have calculated the Kinetic Energy ($\frac{1}{2}mv^2$) of the aircraft at an estimated 30 mph or 44 ft. /sec. this is 48950 Joules and this combined with the increased height of the plane created an increased tipping force of the aircraft. Torque is Force times Distance so any change to the distance will change the torque that could roll the aircraft. Also the gear axle point being moved back 2.75 inches added to the rotation force on the plane. These two forces together resulted in this accident in my opinion.

It would have been better had Kitfox put the axles and height of the gear exactly where they were on the original aircraft. The lack of directions also lead to the accident in my opinion. The gear came without any directions at all.

From: Joyce A. Seymour

Re: Kitfox NKC47

Because of previous problems with the landing gear equipped with a shock chord, I encouraged my husband, Tim, to purchase a spring loaded landing gear from Kitfox, the manufacturer of his homebuilt, light sport airplane. It was on the first flight with the newly installed gear that the accident happened.

The day of the flight seemed ideal with clear skies and light, variable wind. Tim was piloting while I acted as PIC. The take off and flight were normal. After flying in the area for about 15 min., we returned to the Andy Barnhart Memorial Airport in New Carlisle, OH.

The approach was normal and on final, I specifically remember Tim approaching the runway appropriately with full flaps. As a pilot, I felt very confident about the approach.

Upon landing, it seemed that we immediately were compromised. My first thought was that the landing gear was somehow involved.

We ended up upside down hanging from our harnesses. We saw a fire starting in the engine area. Fortunately, Pat Driscoll, a pilot at the airport, saw the accident and rushed to free us from the cockpit. We were told that the cockpit was consumed with fire in 90 sec after the crash.

We were taken to the hospital. I had large bumps on the right side and back of my head as well as soreness in my torso. I fortunately had no internal injury.

Respectfully,

Joyce
