Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

One Rotor Blade made contact with a wire, and the wire contacted the SKED fairings Left & Right, before the wire broke.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The day before the flight I planned our route and checked the weather. I had the helicopter fueled to 1/2 Full. I called and obtained permission/authorization to land on the property. Early on the day of the flight, I check the route and weather on foreflight. I looked at Satellite views and other maps of the area. The weather was bright & Clear, and light winds forecast. Preflight was completed, weight & balance was calculated, with all in the normal ranges. Upon reaching our landing zone, in Class G airspace and no communication needed or available from ATC or tower etc. we circled two times: 600' Recon: size surroundings, surface, slope, safety and then 300' Recon: wind, wires way in, way out, where to auto. The landing was normal & uneventful. After lunch I went out to the helicopter and completed my preflight. I walked out to the road, and I looked in all directions. I observed wires to the north across the road, to the east I observed wires, the building was to the south, and I cleared the area to the west visually, and saw it was open and unobstructed, and the wind was from the west. I performed a weight and balance, everyone loaded back in the helicopter. After going over the passenger briefing and seeing that all passengers were buckled up, I performed start up, warm up and I lifted into a stable hover and maneuvered out over the highway and noted the intended path was clear, was into the wind and unobstructed. We started a normal takeoff, but failed to see and clear a wire and 2-3 seconds later we landed in the center of the highway, the landing was firm but smooth. All passengers were out safely with no injuries pushed helicopter off the road. Departure was at 1:30 pm CST 9 destination was TXK

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I have contacted my Flight Instructor and walked through the incident scenario, and I have discussed how to avoid this situation in the future. This incident could have been avoided or prevented by driving by vehicle instead of flying. Also, this incident could have been prevented by performing and executing a confined area take off, thus avoiding areas that might have lines and/or wires. I did walk the area to be used for my takeoff path during my preflight, and I had already performed my 600' & 300' recon prior to landing. So by walking a larger area, and looking closer & further down the take off area, might have been of value.
