

On December 10, 2020

I responded to an aircraft accident in Manvel, Texas involving N2238K. The aircraft had struck a set of power lines and crashed into a pipeline field approximately seven tenths of a mile from Wolfe Airpark. The owner of the property adjacent to the accident site witnessed the aircraft hitting the power lines. He said the aircraft appeared to be attempting to land in the field.

When I arrived on scene the pilot, Mr. Harvey Hartman, had already been taken to the hospital by EMS. The individual was severely injured and placed into a medically induced coma for several days. He was later moved to a rehabilitation center. Several attempts have been made to contact Mr. Hartman. Due to Covid-19 restrictions, I was unable to go to the rehabilitation center.

Mr. Ed Pataky was on scene of the aircraft but did not see the aircraft make contact with the power lines because it was out of sight below the tree line. He has remained in contact with the aircraft owner. Mr. Pataky said that Mr. Harvey has stated to him several times that he was on final approach to the runway when he hit the power lines.
