Dear Mr. Thomas,

I was flying from Llano Regional KAOO to David Wayne Hooks KDWH :

Touched down around 8:00pm on December 28, 2020 in a field.

Conditions: Dark/night, but clear skies and unlimited visibility.

A few miles outside the delta, I was just about to join the pattern and descending gradually. I was under 2000 feet, to fly below the bravo. I got approval and switched from Houston approach to Hooks common traffic. I made my inbound calls and immediately felt the vibrations die down on my right hand while on the throttle. I pushed it in, no response. Set to glide speed. The propeller had stopped. I began looking for outs while trouble shooting. Restart was unsuccessful, so I squawked 7700, made a mayday call and a forced landing was made in an open field after checking the sectional for what I figured to be the best possible option. I was unhurt and safely exited the aircraft. I was able to communicate the situation with the owner of the aircraft at Texas Flight.

At the time of writing this statement the aircraft is out of the field and back at KDWH with Texas Flight.

I am visiting my parents in Houston and may not receive any correspondence by mail right away. I will be available by email and phone if I can be of any further assistance.

Kind Regards,
