Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft had a main rotor blade strike and all five (5) blades were damaged. No further damage was detected.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 03/25/2021 at approximately 12.30PM CST, approximately 25 miles SSW of KPTT (Lake City, KS area) under partly cloudy conditions and the wind 6-9 Knots out of the NNW, I was flying a lineman to install bird diverters (BD) and had already completed 2 spans (52 BD) and had started in the 3rd span and completed (9-BD) in this span between STR 133 and 134. When we were in position at the next BD installation point, I got into a gust of wind that caused the aircraft to drift into the OPGW wire and when I went to reposition the aircraft away from the fiber optic cable, I saw it fly up and into my rotor system. I immediately started a controlled landing and safely recovered the helicopter onto the ground without injuries to the crew or causing extra damage to the helicopter.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

The owner is adding local weather stations to augment reported weather when the flight crews are working in remote areas. Additionally, for skid operations, the owner has restricted the steady state wind and gust spreads by zone for the aircraft. Zone 1 being the nose, Zone 2 being the tail section, Zone 3 being the right side and Zone 4 being the left side.
