Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This was to be a familiarization flight as the student was not very experienced with winch launching. I have logged close to 60 winch launched flights. I believe he (Kevin) has logged about 40 training flights and has no current certificates. As is our normal practice I was in back and Kevin was in front. All controls appeared to be operating properly including the release.

5/16/21 1300 CDT. 55LL Sky Soaring Glider Club.

Lark 41CR

2 onboard for a winch launch.

Launch was going fine. Reported speed at 70kts and pulled back to decrease airspeed. At that point the weak link failed or the rope broke. Did not know which at that time.

Altitude probably at or above 1500msl. Not sure. Pitch down for airspeed and heading 090 decided to continue to set up a 180 to land. 2-3 seconds further and began a right turn to 0180 degrees. Seemed to have a difficult time completing the turn. Controls were very heavy. Determined we were still too close to the end of the runway so extended the flight to the South. Began a right turn 180 degrees. Still too close to the east end of RNY 27 but noticed again that the controls were heavy. Speed throughout should have been sufficient. Opened spoilers briefly and did not feel that was a good idea so closed them. Continued the turn past the 180 to move further east before attempting to turn left and enter final. At this time we entered a stall/spin and were heading for a tree that was even with the threshold for 09. Tried to climb over the tree but lost energy and impacted the higher branches then pitched down to a vertical attitude. The final impact was quite sudden.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Maintain sufficient airspeed to prevent stall/spin at low altitude.
