Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Not entirely sure. Airplane was upside down on back. Believe tail was taken off. Nose wheel collapsed. Propeller destroyed. Engine off airplane. Cockpit partially crushed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed KFNL at approximately 9:50 AM sitting in the right seat as PIC and Flight Instructor. I was going to give my passenger, Jim Pearsall, the owner of the plane, a Flight Review. We were cleared for take-off by NoCo Tower and departed runway 33 and headed north-east to the practice area to 7500 feet. I let Jim take the controls so he could get reacquainted with the airplane. We talked briefly about emergency operations while flying and potential places to land as Jim had never flown in Colorado before and was unfamiliar with the terrain in this area. After awhile, we started practicing maneuvers. We did some clearing turns and then we did some Steep Turns. Next we did some Slow Flight. Then we did some Power-Off Stalls and then I demonstrated a Power-On Stall and gave Jim the controls to perform the Power-On Stall. Jim took the controls and began to give the airplane power for the procedure and said, "The throttle is not working.". I said, "What?". He said, "The throttle cable is loose!". I said, "My controls." and began pushing and pulling on the throttle lever. The engine had gone to idle power, about 2300 RPM. We were at about 7600 feet. I felt the throttle cable around the lever and it was loose, not tight. After a few seconds of disbelief, I began emergency operations. We were probably now at about 7400 feet facing East. I pitched for best glide speed of 60 knots. Then we started to look for a place to land. I looked to the left, in front of me and to the right. We both saw a rectangular field with light green foliage on it to our right. There was a white water tank (or gas tank) next to the field with what looked to me like a possible road. I assumed the field to be flat. I then aimed for the field. The engine was still idling so I thought maybe we could use choke to add power but that only started to cause the engine to run rough so I closed the choke. I then made a Mayday emergency call still on the NoCo Tower frequency of 118.40. I was using the cockpit Garmin aera 500 to state our location, 12 nautical miles north east of the airport with two souls on-board, emergency landing in a field. Tower said they were mobilizing emergency services. They asked if I could give lat long coordinates but I said no as I did not have time to figure out how to get them from the Garmin area 500. I then started preparing for the landing and told Jim to tighten his seatbelt. I was high approaching the field so I added both notch of flaps but I was still high so I did a forward-slip with left aileron, right rudder. As I began to get out of the slip and level my wings and start the roundout over the field, I saw that the field was not flat but was pitched down to my right some degrees and some big berms of dirt in front of me. I landed main wheels first at about 55 knots on the first berm of dirt and the airplane bounced up in the air and then landed on the second berm of dirt. The airplane then began to roll slightly sideways and down. I tried to grab the brake to help slow the plane down but then the nose wheel dug into the earth and the airplane flipped over. As it was flipping over I could see the windshield caving in and closed my eyes. I then opened my eyes and we were both hanging down in the cockpit by our harness and shoulder straps. Jim said something like, "I'm ok!, I'm ok. I bumped my head but I'm ok. I can't get out of my seatbelt." I said, "Undo your seatbelt." which he did. I then undid my seatbelt and knew that I had a broken leg. My foot was stuck so I could not egress all the way out of the airplane so I asked Jim to help me, which he did and then I slid out onto the wing. The ELT was beeping. The rescue was performed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

An inspection of the throttle cable to the connector for the carburetors may have shown the problem.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Throttle cable to connector for dual carburetors came off of connector. Carburetors went to idle.
