Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

The aircraft is destroyed after flipping over and sustaining major damage to the fuselage, the wings and the cabin.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I was the pilot of N174R. We departed runway 12 at Port Aransas (KRAS) at approximately 1515 on July 16, 2021. The wind was around 10 knots from the southeast and there was no turbulence. After take-off, I contacted Corpus Approach for my IFR clearance to Addison. I received the clearance and headed to Worry intersection. At around 2000 feet, my wife and I both noticed a smell in the cabin. It didn't seem like an engine fire, more like a chemical smell. As we climbed out, smoke began entering the cockpit from the console. As I did not know the source of the smoke, I declared an emergency and asked Corpus for directions to the nearest airport. The controller advised me to go to KRFG, Refugio, which was around 7 miles away. I put the location into the GPS and headed toward the airport. As I reached 5 miles, I lowered the gear. The gear did not extend. I then concluded that the smell and the smoke was from the gear motor burning out. We then proceeded to use the manual pump to extend the gear. After many pumps, the main gear appeared normal, but I did not get a green light signaling complete locking of all three landing gears. I concluded that the nose gear was not fully extended as I did not get conformation from the light. I extended two notches of flaps as normal procedure.

I landed on the asphalt runway 14 in the center of the runway. I kept the nose up as long as possible to keep the weight off of the nose gear. When the plane quit flying and the nose began to settle, the plane immediately veered to the right of the runway and went off to the side. The plane rolled and skidded several hundred feet. The nose eventually hit the ground, causing the plane to invert. There was no smoke and no fire.

My wife and I extricated ourselves from the cockpit and crawled out of the plane. Both of us were ambulatory and alert. When no one appeared in a few minutes, we called Corpus Clearance to advise them of the situation. Then the airport manager, the highway patrol and the para-medics appeared in that order. We removed the personal items from the plane. My wife began having a severe headache and chest pain, and she was taken to the ER in Refugio. The manager took me to the hospital to be with her. I had no serious pain. Her CT scans showed [REDACTED] and a likely [REDACTED]. Her head CT showed no acute injuries. She was discharged with oral medications.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

There should be a scheduled inspection of the gear motor. This is the second time this has occurred in one of my planes. Fortunately, the first time, the gear extended properly and there was no damage.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The gear motor apparently burned up and failed.
