

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Harrah State: OK
ZIP: 73045 Country: USA
Latitude: 35.47N Longitude: 19W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/23/2021 Local Time: 1520
mm/dd/yyyy Time Zone: central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: NC83365

Manufacturer: Aeronca

Model: 7AC

Serial Number: 2032

Year of Manufacture: 1946

Amateur-Built: ☒ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1350 lbs
Weight at Time of Accident/Incident: 1260 lbs

Number of Seats: 2 Flight Crew Seats: 1
Cabin Crew Seats: _____ Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate (Check all that apply)

☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

The damage to the aircraft was due totally from it's flipping over after touchdown. The rudder was destroyed but the horizontal stabilizer and elevators were largely untouched. The outside leading edge of the left wing is damaged due to the fact that the spar was broken. The propeller and nose cowl are damaged beyond repair. The fuselage was largely untouched. The impact of the tail protected it apparently. Unknown is the damage to the engine. Unless it is removed and tested it cant be determined.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of this flight was to do recurrent tailwheel training for a pilot who had contacted me a few days earlier. He was supposed to travel to Seattle, WA and pickup a tailwheel aircraft C170B that he had recently purchased and ferry it to another town in Washington State for renovation and he hadn't flown tailwheel in a while. He told me he had previous tailwheel time in Alaska doing bush flying. I base the aircraft at KPWA, so he and his wife picked me up at my hangar and we drove to pick my airplane up from its annual inspection. This airstrip 10L2 is intimidating to anyone without experience but due to his former tailwheel flying in Alaska I didn't think it would be a problem. Upon arriving I set about preflighting the aircraft, but a former friend I hadn't seen in quite sometime just happened to be there and we conversed while I preflighted. Looking back, this took me off task. I instruct from the backseat so I put my pilot in the front and acclimated him to the systems and procedures for starting. It's a handprop aircraft. Upon starting we taxied about half way down the grass strip and back to give him the chance to get the feel. I then did the standard pretakeoff checklist items. I told him I was going to do the takeoff and he was to shadow me for this first takeoff. It was a hot day with a density altitude above 3000 but my Champ has the upgraded 100hp engine and should handle this easily. Shortly after takeoff at an altitude of approx 150 ft. I experienced a more than usual sluggishness which I initially thought was due to the heat. A second or two later it was obvious that it was more than that and after a few "Sully" seconds the engine started surging between 2000 and 2400 rpm. I initially turned to the west just to see how far I was from the strip and immediately turned back to the south. My pilot and I quickly started problem solving on where to land. We were too low for anything else. I estimate I was about 50-100 ft above the trees and simply was trying to survive. I initially passed up some open areas still hoping I could make it back. Finally, my front seater pointed at 10 o'clock low to an open area and the engine quit. I did a hard forward slip to the right and landed hard but it was a normal 3 point landing. I'm guessing I progressed about 50 ft when a combination of very tall grass and wet soil caused us flip over. After asking each other if we were ok, we were trying to figure out how to get out of the airplane while hanging upside down in our seat belts. He is much younger than me, so he got out first, and then I unbuckled my belt and fell to the ceiling. I was trapped for a minute until he grabbed my right arm and pulled me free. Within moments the property owner drove up in his atv and told us that he called 911. My pilot/passenger was totally unscratched but he noticed I had a head wound. Later, after adrenaline wore off I discovered numerous bruises. I did not seek medical attention.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The cause of this accident was, painfully for me to admit, pilot error due to inadequate pre flight. I was distracted by the conversation with a friend and failed to notice that I did not turn the fuel control valve to the on position. I had enough fuel in the lines and bowl to run about 2-3 minutes.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Joshua, here's the passenger statement take it in its context I'll deal with his emotion later

Heard a fun rendition of our story today from a few people at Sundance. I figure if you're going to tell the story, you should have the facts straight.

The reason your fuel valve was closed was because after i pulled you out, and helped you get medical treatment, i crawled back in the plane and closed it. You know, as part of the normal shutdown procedure... and to make sure we didn't burn the guys land if it ignited. It wasn't closed when we departed. Although, a nice idea to blame me.

Please don't contact me again.
