Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage only to aircraft: nose section of fuselage cracked, landing gear sheared off, engine overheated

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flew two legs, KGSH to KVTI and KVTI to KGRN without incident. After a short rest at KGRN reboarded and departed for KLND 1546 Mountain Time.
Cylinder Head temperatures rose on take-off and climb-out. I flattened the climb gradient to increase airspeed to increase cooling airflow, but CHTs continued to rise.
I adjusted throttle and mixture in an attempt to reduce CHTs, but CHTs kept rising. I reversed course 1552 to return to KGRN. Shortly after this the engine stopped producing power.
I maneuvered for a forced landing on the rolling grassland below. During the landing the gear collapsed and the aircraft slid to a stop in the direction of flight.
I opened the canopy; both pilot and passenger exited the aircraft. I checked to see if fuel was leaking, and observed no leaks.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have remained in the airport environment, circling over the airport, while attempting to stabilize CHTs and bring CHTs down. Then when unable to establish sufficient cooling, I would have been able to return to the airport.
