Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We took off around 9:40am-9:45am US-EDT. We both checked the weather the night before the flight, and right before we departed. I did my pre-flight check (checked the oil, fuel, control surfaces, lights, tires, flaps, etc.) and we boarded the plane. The checklist for the engine startup was used and the plane started and ran normally. We taxied from the tie-down area to the run up area at the beginning of runway 21. Before take-off, I performed the run-up checklist (RPM, magnetos, carburetor heat, etc.), making sure everything was in the green (vacuum, oil pressure/temp, fuel, etc). I did my takeoff briefing, waited for an aircraft to land that was on a short final approach for runway 21, announced our departure, taxied into position and departed with full power. The aircraft lifted off and we started climbing at V_x (65) with my hand on the throttle. Within a few seconds of lift-off we noticed the aircraft was not climbing normally and the stall warning horn sounded. The plane was very low and began losing both power and speed very quickly. I looked at the RPM gauge and observed it rapidly dropping from 2500RPM to 1500RPM and continuing down. Immediately I established V_g (best glide speed) over a corn field, but we were so low all we had time to do, was put the plane in landing configuration and perform a soft landing. Everything happened very quickly and I felt it was a good landing up until the plane flipped upside down.

Injuries:

No injuries, only five small bruises on my body and nightmares last night
