I went to Chet instead of the AOMC Controllers - I don't think they would honestly know the answers to your questions. Here is what I got back when I asked about the time being in EST (UTC-5) - yes it is EST - as well as the "inop" question.

Both statements are correct. I would add that the SENSOR IS INOPERATIVE/OPERATIVE wording probably isn't the best for this condition. The sensor inoperative message appears whenever the winds go missing, and sensor operative message when the winds return. This may be because of an inoperative sensor, or maybe that the wind sensor data is missing because it did not pass internal quality control (as was the case here). This can happen for reasons other than sensor malfunction (birds roosting on it, for example...the winds go missing when the bird lands, and return once it flies away).

So, let me know if this creates more questions.
Lora

On Fri, Sep 10, 2021 at 3:07 PM Richards Michael <[REDACTED]@ntsb.gov> wrote:

And very sorry, in addition, that those records mean at 1755 EST/1855 EDT, the ASOS wind sensor was inop, then came back 5 minutes later.

Just want to make sure we have this absolutely right.

Thanks for your help here,

Mike

Hi Lora. Can we confirm from AOMC that in the attached file, for the section that contains the following records, that the time stamps in these records are eastern standard time (UTC -5) ?

08/24/21 17:55 *ST 1791 WIND 425NWS SENSOR IS INOPERATIONAL

08/24/21 18:00 *ST 1790 WIND 425NWS SENSOR IS OPERATIONAL

AOMC received a call from ATC GA at [REDACTED] requesting an archive of KLAN because of
an aircraft mishap on August 24, 2021. The archive data is under filename: KLAN0824.cap:

Site ID:KLAN

Caller's title: Air Traffic Controller

Caller's phone # : [REDACTED]
mail address: [REDACTED]@noaa.gov

Caller's e-

When did the accident occur? 08/24 /2021 06:58L 1355Z

Where did the accident occur? On the runway at the departure end

Were there any fatalities? Unsure

Report Reason	Relocate a Station (Compatible)		

Report Reason Details

First rendition update since initial station load in 1996. Background: Originally installed in 1993, the LAN ASOS visibility and ceilometer were moved from the rest of the instrumentation platform by June 1996. All remaining sensors except for the wind sensor were relocated with the visibility sensor and ceilometer on September 14, 2004. This was a move of 1.1 miles on a heading of 255 degrees. Thus, only the wind sensor remains at the original lat/lon of 42.78030, -84.57890. The station start date of 1/1/1948 on virtually all renditions for LAN is technically incorrect. ThreadEx shows "5/1948", but investigation of Form 4303A from the Weather Bureau in 1948 indicates the meteorological instruments were moved to WBAS Lansing effective 6/29/1948, and signed by officials on 8/8/1948. This rendition reflects all known and/or suspected metadata for LAN as of 9/14/2004 following the sensor platform move. Observer data was updated to reflect the personnel likely overseeing contract weather observations in September 2004. Observation data was updated to reflect midnight reporting times for all elements since LAN is a LCD site. Snowfall data was taken at LAN during the period of time the contract weather observers were present, likely from 12/1998 through the effective date of the rendition, hence the element was added. Added precipitation and snow elements, changed HPD element's HTB to AWPAG, updated az/dis to temperature sensor. This rendition will be followed by a correction to previous renditions for the station start date.

COOPERATIVE SERVICE STATION REPORT

Station Number	Rendition	SID	Begin Date	CPA	Climate Division	NWS Region

Additional Station Information

Permanent Remarks

Topography

LAND IS GENERALLY FLAT WITH CLAY AND LOAM SOIL.

Driving Directions

Take Exit 90 off I-96 to Grand River Ave. Head east on Grand River Ave for 4 miles and turn left at Capital City Blvd toward the terminal building.

Special Network	None			
Description:				
Actual provision of snow board and snow stick by the NWS to the Contract Weather Observers is assumed but cannot be proven since this rendition is 14 years old. Placement of board is estimated with respect to AWPAG location. Contract Weather Observers were taking snow measurements at Lansing, likely starting in 12/1998. This is based on missing snowfall data from June 1996 through November 1998, with a resumption in snow data beginning in December 1998.				
Level2 Equipment			Serial No	Installed
