Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot Narrative:

I was flying skydivers up to 14,000 feet MSL. On the 8th load of the day, I departed Delta (KAJZ) at approximately 11:30. The plane climbed normally to altitude. To set up on jump run, I applied partial carb heat, closed the cowl flaps, reduced power to 15 inches MP and set the RPM for 2200. Once the skydivers exited, I applied full carb heat and pulled the throttle back. I don't remember if I pulled it all the way back at this point or kept the power on a little. At some point, I pulled the power all the way off. I descended at 120 mph, doing a wide arc around the area in order to set up on a long final approach, as I normally did. Around 8,000 ft MSL, I initiated a turn onto final, and started to apply a little power. I noticed that it didn't sound normal. As I rounded out of the turn onto final, around 7,000 ft MSL, I applied full power and there was nothing. I set the airspeed to 80 and pushed the mixture full rich and the prop full in. I played with the throttle and pushed the carb heat in and pulled it out again. I noticed a tiny sputter during this for a second and then nothing.

At first it seemed like I could make the airport by gliding to it, but then the plane descended more quickly than I expected. My immediate response when I saw the airport rising above me was to pull back on the stick to about 65. I corrected this after a few seconds and reset to 80, but at this point, it was clear to me that there was no way to make it back. I surveyed the area to see where I could land; first veering off to the highway and then quickly eliminating that option because it seemed like there were too many cars. There were little roads alongside the fields in the area, and I was looking at those and still trying to get some engine power back, which included trying to restart. I then I made a radio call saying I had engine failure. One of the local pilots and mechanics saw the plane descending and radioed to tell me to land in a field. There was one in front of me, so I chose that one. I set the airspeed to about 60. I went to put on manual flaps, which required me to look down for a second. When I looked back up, the ground was coming up fast. I pulled the stick all the way back and then landed on the main tires pretty hard. At that point, I had time to worry that the gear might be damaged. Soon, though, the nose went forward and I was against the front windshield as the plane flipped over. The field I had chosen was extremely muddy--the farmer had been irrigating. I hung upside down by the lap belt and smelled fuel. I saw it flowing down the left side of the windshield and made every effort to get out of the plane as quickly as I could.

The airplane did not catch on fire and after several minutes, I went back to it and turned off the master switch and got my phone. Soon the mechanics and the owner arrived and turned off the fuel and got things out of the plane.

Immediately, we could see that there was damage to the wings--one more than the other. The prop was stuck in the mud and the blade ends turned inward. The tail was undamaged. We had to wait a week to retrieve the plane so the field could dry out.
