Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landing with wheels retracted:
Composit propeller loss 3-4" off blade tips
Fuselage bottom - center fiberglass ground down
Left wing hit runway light with damage (top & bottom) from leading edge to spar
Left wing fuel tank sump drain ground off, leaving fuel tank empty
Left wing aircraft jack point ground off

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

New variable pitch propeller installed on 09/03/2021 at aircraft hanger on KEAU by Gibson Aviation mechanic. Flight on 09/07/2021 was solo to verify prop operation with a landing at KLUM to report flight operation results and pay for services provided by Gibson Aviation.

Departure from runway 32 at KEAU was normal with engine and prop RPM performing very well in take-off, climb, and cruise. Prop was changed to cruise configuration easily and full power cruise was verified before starting approach to KLUM. AWOS wind report of 310 degrees at 12 and gusts to 18, was a stronger crosswind than expected but I felt okay for a wheel landing with full spoilers after touch down.

With the glider having a very slow approach and landing speed with a wingspan of 58 feet and only 3 feet of wing tip to ground clearance, the wind is an important factor with all landings. I have actively practiced crosswind landings in this aircraft and feel confident in these landings.

With 06/10/2021 being my last flight in this aircraft, the fact that wind conditions were higher than expected, and recent webliners stressing the need for stabilized approaches to landing, I decided to use the aircraft checklist very loyally for the entire pre-flight and flight.

Approaching KLUM from the southeast, I advised unicom at 5 miles intent to land on runway 27. No response. I made a 45 degree entry to left base leg for runway 27. I was reading the aircraft **LANDING** checklist: "Gear-Down; Prop - Set to <1200 RPM, <100 Km/Hr, Pull Prop Control 30 & Release, Observe RPM Increase; Boost Pump - On; Spoilers - Check Operation; Maintain A/S>110Km/Hr on Approach."

When first reading the **LANDING** checklist, I did not put down the gear due to the high air speed and distance from the airport. I changed the prop, put the boost pump on, and checked the spoiler. My radio report for entering base leg and again turning final had no response. I also read the checklist on base leg and start of final with referencing prop, pump, and spoilers okay. On the last 400 feet of final approach, with light to moderate turbulence, I was concentrating on maintaining 110 km and maintaining centerline. Flare was good for a wheel landing with little use of spoiler and anticipating full spoiler after touchdown.

I did not feel the prop hit the payment but I saw a white circle as prop tips hit pavement and then the aircraft was sliding on the runway. I used left rudder to slide off to the edge of the runway because I did not want to block the runway. The aircraft slid for approximately 500 feet before coming to a rest 5-10 feet off the runway on the grass.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

In all of my flying experiences I have used "GUMPS" (Gas, Undercarriage, Mixture, Prop, Seatbelts) before every landing. This was done verbally in pattern, on base leg, along with "3 (or 2) in the green" always verbalized on final. With 3 months since my last flight in this aircraft, due to propeller maintenance, I decided to follow the aircraft checklist and have a stabilized final approach.

This was a clear, no cloud day with sun on the instrument panel which made the 2 green lights and red gear up light not readable. A gear up warning horn cannot be heard with the headset on.

Using the aircraft's written checklist and concentrating on a stabilized final for landing was a big change from my normal approach with the memory/verbal "GUMPS" checklist. When doing something in a different way the concentration on doing it correctly was a major distraction that I should have recognized.
