

General Information

Date/Time of Submission: 25 AUG 2021 01:03

Date of Event (DD MMM YYYY): 24 AUG 2021

Time of Event (HH:MM) Local: 00:00

Location: Kent State (1G3)

Submitter First Name: Evan

Submitter Last Name: Gilmore

Submitter's Telephone Number(s): [REDACTED]

Submitter's Email Address: [REDACTED]

RISK (Matrix in FOM): Low Risk

Aircraft Make: Cessna

Aircraft Model: CE-152

Kent Number or N-Number: N95445

Type of Flight: Dual

Phase of Flight: Landing

Flight Rules: VFR

General Outcome Damage: NO

General Outcome Injuries: NO

Is it OK to contact you about this incident?: YES

Would you like feedback on this incident?: YES

I filed a NASA ASRS form concerning this issue.: NO

Please provide details: On return from a night XC to BVI, on short final, over the runway I noticed a deer maybe two or three with my peripheral vision off to my right side. We were entering ground effect if not in ground effect when I noticed the deer running out in front of the aircraft. I immediately added full power and proceeded to make a climbing right turn to do my best to avoid the deer. I then heard a loud noise of the deer impacting the aircraft. After this happened the aircraft touched down hard. I was able to maintain control and taxi the plane off the runway. After exiting the runway I used a flashlight to check the right main, and had my student check the left main. I decided that we could taxi the aircraft to the ramp and tie down the aircraft and inspect for damage
