Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Numerous bend and twisted parts including left main gear leg, left strut, bent prop and damaged engine cowling. Vertical stabilizer and rudder were mangled. No damage to any one or structure on the ground.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft has just turned left downwind for runway 18 when the student felt the aircraft yaw to the right. When the aircraft did not respond to his control inputs I took the controls and immediately applied left full rudder and left full aileron. The rate at which the aircraft turned right lessened but would not fly straight. We were over a large freshly tilled field so I began a descending right turn with the intent of landing in the field. As we approached the ground I pulled power to idle and began to flare for a three point landing. Upon touching down, the main wheels rolled for approximately 25" before digging into the soft ground and the aircraft nosed over and came to rest upside down. We unbuckled our seat belts and exited the aircraft making sure the fuel and master switch were both off.
