Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Downed powerline, minor damage to mesquite trees, aircraft destroyed

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 0830 CST the accident aircraft departed from an off site landing zone approximately 1/3 mile south of the accident site. The purpose of the flight was to apply a selective herbicide targeting mesquite trees. According to the ground crew responsible for loading the chemicals into the aircraft, the pilot made two or three passes applying herbicide on the target field (see attached maps). About 3 or 4 minutes after takeoff the witness reported hearing a metallic impact sound coming from the direction of the helicopter. He subsequently heard the impact of the crash and an abrupt end to the engine and rotor blade noise coming from that direction. He drove as fast as the terrain would permit in the direction of the sounds. Attempts to reach the pilot over a hand held VHF aviation band radio were unsuccessful. The witness found the accident site, dragged the pilot from the wreckage, performed first aid and attempted life saving measures while on the phone with emergency services.

Upon review of the pilot's personal cell phone, the last text sent or received was at 05:15am and the last call sent or received was the previous evening.

The pilot was off duty the previous evening at approximately 6pm after which he ate dinner with his family and rested in a nearby hotel. Spray operations commenced at 0630am on the day of the accident.

The ground crew reported that the pilot was in a good mood, enjoying the cool of the morning, and all systems were operational and running smoothly. They were ahead of schedule at the time of the accident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This was a very difficult and dangerous field for aerial application due to uneven terrain and multiple overhead power lines running at seemingly random directions. The mesquite trees further masked the powerlines and poles. This field should have been flown at a height that would permit the aircraft to pass above all obstacles. If that increased application height and wind combination would cause chemical drift off target, the application job should have been declined or rescheduled. Contributing factors to the wire strike include sun glare in the pilot's vision due to time of day and direction of flight.
