Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> ENGINE/PROP DAMAGE, LEFT WING TORN OFF, BELLY OF AIRCRAFT DAMAGED.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. On the morning of October 7th, 2021 @ 6:23MST I obtained a briefing for the flight starting at KFNL and ending at KCPR. After the briefing I did a visual walk around of the airplane including dipping the fuel tanks (approximately 22 gal. each side) and checking the oil (6 quarts). After the checklist start up, I let the engine run to warm up while I got local weather and prepared for the flight. We taxied out to the turn out for runway 15 to perform a run up. After the run up at approximately 6:52am MST we entered runway 15 for departure. The power was advanced and I was watching the speed for rotation as well as the horizon. After we were airborne and climbing I began checking the other instruments and noticed the prop was over-revving at about 2900rpm and the engine manifold pressure was dropping. I eased the throttle back slightly so that the prop was back in normal operating range and planned to return to the airport for an inspection. At this point, it was too late to re-land on the runway. We were still climbing so I raised the gear to reduce drag and aid in the climb. When sufficient altitude had been gained, I began a left turn into the traffic pattern in order to return to the airport. At that time, the engine began to lose power and altitude. I began pushing the nose of the airplane over to keep it from stalling and looking for a place to land. Shortly after the engine started to fail, there was an audible noise "a loud pop or bang" that came from the engine/prop of some component failing and the engine stopped. Immediately, I pushed the nose of the airplane over to establish a glide. Due to multiple obstacles and traffic the only place to land within glide distance was Crossroads Boulevard against oncoming traffic. This was due to the fact that east-west traffic was stopped at a red light. Upon touching down, the airplane slid several hundred feet and the left wing hit a street light pole tearing the wing off and causing the plane to spin and stop on an adjoining grassy area. At the time the wing hit the light pole, both the passenger and I were thrust forward. My forehead hit the yoke and was lacerated but the passenger was not injured. When the plane came to a stop, the ELT had been activated and the passenger climbed out of the door located over the right wing. I followed in climbing out of the door over the right wing and was given medical attention from a local police officer until EMT's arrived.

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

UNKNOWN, SOMETHING BETWEEN THE PROP AND THE ENGINE MADE A LOUD POP OR BANG SOUND AND THE ENGINE QUIT.

FYI-THIS ENGINE WAS TORN DOWN AT APPROXIMATELY SMOH 1000HRS, AND DISCOVERED THAT A SMALL IDLER WAS FLAKING METAL. THE ENGINE WAS RE-ASSEMBLED AT THAT TIME WITH NEW LOWER END BUSHINGS AND BEARINGS. OIL CONSUMPTION SINCE SMOH HAS REMAINED NORMAL AT APPROXIMATELY 1 QUART EVERY 6-8 HOURS.
