Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings severely damaged. Right aleron ripped off. Left wing strut bent. Fabric damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had done three touch and go's at LaPorte Municipal on October 30, 2021. All were routine. Weather was VFR, clear, no clouds or wind, relative humidity was 22%. I decided to take on fuel for additional touch and go's and added 5 gallons of fuel to each tank. Prior to the next takeoff the preflight check and runup was normal. Takeoff and climb out were routine, and climb rate was typical. Left traffic is used at LaPorte. I turned crosswind, then downwind and climbed to about 800 ft AGL. Abreast of intended touchdown point, I reduced power and began to make a turn to the base leg. I observed that the aircraft was losing altitude rapidly and applied full throttle and carburetor heat. The engine did not respond. I saw that the tachometer was indicating approximately 600 rpm. There was no time to diagnose the problem or attempt an engine restart.

The runway and field were beyond reach, and the street below (Spencer Highway) had heavy traffic. I turned the aircraft toward a pipeline right-of-way, but did not have enough altitude left to fly over the high voltage power lines. I flew below the power lines but snagged a drooping telephone line and hit some fence posts. The aircraft came to a quick stop inside the right-of-way. The aircraft did not nose over and there was no fire. I was uninjured and left the aircraft after closing the fuel shutoff valve.

LaPorte police and EMT unit responded very quickly. The EMT's confirmed that I was not hurt and left after a few minutes. The police helped me contact Houston TRACON and provided me with a telephone number to contact Mr. Rick Bolton of the FAA. After taking the preliminary information, Mr. Bolton approved removal of the aircraft to the hanger at LaPorte.

Subsequent inspection by FAA inspectors from Houston FSDO revealed that the fuel on board was OK. When the fuel shutoff valve was opened, considerable fuel leaked out of the air intake. The carburetor and carbheat box were removed to be sent to the Lycoming factory for further inspection.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☒ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

When the fuel shut off valve was opened, a significant amount of fuel poured out of the air intake. If this happened in flight it may have flooded the engine with excess fuel and caused the loss of power. FAA investigators removed the carburetor and carb heat box to ship it to Lycoming for further inspection.
