Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Ditched aircraft in salt water bay. It sunk.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was planning a day trip by myself to Rockport, Tx for fishing Nov 15, 2021. I hangar my plane at KHYI. I started checking weather 3 days out. Checked weather the night before and again before departure. The weather was going to be good in Rockport, but there was fog at KHYI when I got to the airport at 0615. The plane was hangered and brought out for me prior to arrival at the airport. I did a preflight of the plane systems, checked oil (10.5 qts), fuel level in all 4 tanks, drained sump, caps flush and locked, walked around, etc. I had full fuel (20 gal) in each tip tank and between ¼ and ½ (approx. 15 gal) in each main as verified with gauges during preflight (this corresponded with my recollection of when I landed from my last flight). The flight to KRKP was going to take 45 minutes. My plane burns 35 gph on climb out and 17 gph in cruise. I had filed an IFR flight plan, but by 0635, the fog was lifting. I had good visibility and could see the sky above me. I departed around 0645 VFR and climbed to approx. 3500'. At altitude, I leaned the engine to 17 gph (I have a mechanical as well as digital fuel flow meters) and switched the fuel to burn from the left tip tank as I had pre-planned. I noticed that the main fuel gauges indicated more fuel in the tanks than was indicated on the ground. I reasoned that the plane was in a different attitude in level flight and accounted for the discrepancy. Both main tanks were now indicating about ½ full. About 20 minutes into my flight, I noticed a trail of fuel being sucked out of both the left and right main gas caps. Thinking it might be condensation as the weather was very humid, I watched for a couple of minutes and noticed a blue streak on the wing thus verifying that it was fuel. My left fuel gauge was indicating an increased fuel level as it should when burning from the tip tanks. I was now about ½ way to Rockport, the weather in Rockport was cloudless with winds out of 150 around 10 mph so I decided to continue to KRKP as planned. About 30 miles out, I switched back to the left main fuel tank to prepare for landing. I checked weather in KRKP, reset altimeter and dialed in the KRKP RNAV 14 into my Garmin 540/430 as well as my iPad in Foreflight. I tuned into 123.05 at KRKP to monitor traffic and heard a corporate jet calling out a departure. I called in my position about 20 miles out and broadcast my intentions. My plan was to fly to the FAF (NUEAR) and do a straight in to rwy 14. I had pulled power back to 20 " to slow the plane down. When I hit the top of the white arc I put in approach flaps, reduced MP to 17" and descended to approx. 1200'. Upon crossing the FAF, I lowered the landing gear. Soon after passing NUEAR, my engine sputtered a couple of times and quit completely. I attempted a restart by switching to the right tank (the gauge indicated ½ full in that tank), but the engine did not re-start. I switched the fuel lever back to the left tank after no restart (it was also showing ½ full). I was at a low altitude, with a dirty plane and realized I was going to have to ditch the plane about 1.5 miles off the end of runway 14 in Copano Bay, so I decided to raise the landing gear back up to hopefully prevent flipping the plane upon contact with the water.
