Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Top of fuselage, wings, horizontal stabilizer and elevator dented and bent. Vertical stabilizer and rudder bent and crumpled. Rear part of fuselage twisted slightly. Left door plastic broke when I opened it. There was not any damage to property as it was in deep snow.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On January 2nd 2022 I departed 7V2 at approximately 10:06 AM, destination Blanding UT (KBDG), fuel stop, Clark Mem Fld (KCMR), fuel stop, final destination 27AZ, and climbed to my cruise altitude of 10,500 ft reaching it somewhere around Olathe CO. Weather was, high pressure, winds calm, temperature around 4 deg F. At approximately 10:35 I got an indication on the Dynon of fuel pressure dropped from 44psi to 39 psi and then it came back to 40 but never returned to 44 (normal operating pressure) I started to experience loss of power a minute or so later and noticed that the fuel pressure and tach were dropping to zero at the same time and then they would come back up, fuel pressure only came back to 40psi, the engine did not quit but would loose power, it would then pick back up and then loose power again. I attempted to rectify the situation by switching the auxiliary high pressure fuel pump on, it made no difference. I turned the boost pump on and observed fuel returning to the tank through the vent line from the header tank, this is normal, so I know I had fuel in the header tank. As I continued to loose altitude because the engine was not producing continuous power and I was not able to rectify the issue, I was monitoring 122.8 (Montrose), so I called out mayday, mayday, mayday on that frequency hoping someone would hear me, I did not feel I had time to change to 121.5 because I was focusing on flying the plane and finding a landing area. I continued looking for a suitable landing area because at that time I knew I was not going to be able to continue in flight. I saw a clearing if trees I thought would be suitable for landing so I turned approximately 180 degrees back toward Olathe and set up for a forced landing. As I approached the landing zone I deployed full flaps and just before my wheels touched the snow I applied full up elevator. The plane landed in the snow and nosed over and on its back. When the snow settled I was upside down, I pulled the latch on the harness, turned myself over and opened the door. I got out of the plane and assessed the situation. The airplane was intact and I was uninjured. I had no cell service but remembered I had a hand held com radio. I tuned it to 122.8 (Montrose KMTJ) and broadcast a mayday, I was standing by the plane and could hear the ELT broadcast bleeding over into the com frequency so I knew it had activated. I was able to communicate with an airplane flying into Montrose and told them I was down and needed help but was not injured. There was another private pilot going over and he heard the call and circled until he saw me and relayed my location, at that point he continued on with his flight. I gathered my belongings from the plane and made a plan in case I had to spend the night there, I had adequate survival gear for several days. I stepped away from the plane to take pictures of it and discovered the snow was very deep, I was able to take pictures and then get back to the plane. After some time I heard a helicopter and it flew towards my location, I waved a red towel as it went over and assumed they saw me. The helicopter went around and headed off to the west, I assumed it was looking for a way to get snowmobiles in to rescue me. After a while they finally came back and I contacted them on 122.8 and helped them locate me. They circled and looked for a place to land. They landed about 1/2 mile away and called on the radio asking me to head toward their landing site and they would meet me on snow shoes, I called back and told them the snow was too deep for me to attempt to walk out and I suggested they drop me a pair of snow shoes to walk out on. They lifted off and dropped me a pair of snow shoes, I retrieved them, put them on, gathered some of my belongings and headed to the landing zone. The pilot met me part way. We got back to the helicopter, we all boarded and headed back. As soon as I got back to my vehicle I contacted the sheriff and he gave the phone numbers to contact the FAA and NTSB, I called them and answered their questions. The airplane was released to me. I then contacted my insurance company. I called several phone numbers in Montrose, located a helicopter service and made arrangements to retrieve the down airplane on the 4th, we retrieved the airplane but did not have time that day to get it back to the hangar. On the 5th they brought it to the hangar at 7V2. We unloaded it and put it in the hangar.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Do not know what caused the engine to loose power at this time.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Cause unknown. Fuel pressure dropped from 44psi to 40psi and Tach went from 5000 rpm to zero several times before landing in the snow.
