Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Heavy damage to the left wing and fuselage behind the luggage compartment. Leading edge damage to the right wing and right landing gear. Right wheel fairing departed aircraft at scene.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departed 04G at approximately 14:45 for KYNG to verify proper operation of newly installed uAvionix ADS-B tailbeacon. Following confirmation of accuracy at KYNG our aircraft entered the downwind leg of the traffic pattern at 04G for Runway 02, at midfield added 10 degrees flaps and deployed full carburetor heat. At that time the engine stumbled and quit. I attempted to restart the engine but was unable. I increased flaps to 40 degrees and executed a teardrop left turn to the runway. At this point I was below the treeline but I was still too high to make a touchdown and floated long, landing on airport property beyond the runway in brush and saplings at stall speed. The impact at the scene was just enough to slide our headsets into our laps. The aircraft was left wing down upon the ground with the fuselage leaning against a tree. The tail was propped up by a sapling and did not touch the ground.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Cruise operation during low dewpoint / temperature spread should be conducted with PARTIAL carburetor heat.
