Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

No property damage. Left Wing tip bent up. Cowl Bent in. One of the four struts (two on each wing) bent partially. Engine mount tubing slight bend. Prop slight bend on one of the two blades.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After landing on runway 36, I taxied around the area, then to the fuel tanks where I topped off both fuel tanks adding 9 gallons or 60 pounds. Local residents living on the field advised of soft spots due to melted snow from a few weeks prior heavy snow. I walked the areas and taxied on taxiways, and on runway 18 without encountering any issues. Turned around in the displaced threshold area of runway 36 intending to taxi to the departure end then onto the West side of runway 36. The turnaround and taxi had been normal, no particularly soft spots that hindered taxi, but it was in spots slippery damp grass, not from any recent precipitation but from wet ground beneath turf from the snows on the first of February.

I fast taxied to the departure end of runway 36 between the wooden markers, onto turf runway 36 which is over 100 feet wide. I angled toward the East side of the runway which appeared dryer than a large dark spot ahead in the middle of 36. I advanced the throttle to see if a takeoff roll would seem normal. It felt okay, 450 feet approximately after reaching 35mph not more than 40mph approx I could not see well (because it being a tailwheel configuration) what appeared a darker spot, the tail raised, as the plane slowed rather quickly at about 600 feet of travel. Then, the tail went higher than normal, the plane struggled even with full power, and it slowed in what later investigation showed was a very soft spot with mud beneath the turf. It was not so soft as to have feet sinking when walking, but nearly 1400 pounds of plane on two wheels was enough that it did sink down perhaps two inches in the soft turf and that soft muddy spot is what impeded a takeoff. The airplane jerked one direction, then the left wing tip hit the turf. That stopped the plane instantly, the prop stopped in the muddy turf. Then the plane went over onto its nose, then onto its back. The 4 point shoulder and lap belts prevented any injury. The vertical stabilizer came down slowly enough into the soft turf that no damage was sustained on the vertical stabilizer & rudder. No parts left the plane. I shut down the avionics, all switches, etc., master off, magnetos off, fuel shut off. then released the 4 point harness belts, and exited the plane. The doors still worked normally. With help of some local aviation community residents, we righted the plane and pushed it off the runway and then into an available hangar. No fuel leaked. No property damage.

Somebody said that somebody else had called the police to report a plane incident., Evidently they were not interested in coming out, because no officials arrived.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Leaving the plane there and getting a ride home rather than trusting to a soft field takeoff would have avoided the incident entirely.
